Fabrication & Field Services

In-Plant Capabilities

Industrial Power Inc. employs welders, fabricators, and millwrights, some with 20 plus years of experience in food processing equipment fabrication. We assist companies on weekend work as well as do complete equipment design, fabrication and installations.

We also offer a full machine shop with CNC and Manual equipment, this assist our Millwrights with bracketing, custom shafting, mounts and custom machine parts. Our machine shop is also equipped with a CNC water-jet that helps us turn quality work over faster than most shops our size.

Process Piping is another skill IPI offers, we have a licensed master plumber on staff to help with all the layouts and installation of sanitary tubing and process pumps we install for our customers.

Shop Capabilities

Our fabrication shop has the capability of shearing, bending, rolling, water-jet cutting, and welding among other things, we have manual lathes and mills, along with an Okuma CNC lathe and an Okuma CNC mill with a rotary table. Our CNC lathe has a sub-spindle and a mill head which can be beneficial in saving time by reducing handling.

When hired to do a job, IPI has the shop size to layout and test all of our custom conveyors and equipment before it leaves the shop to be installed. This helps us insure a quicker run time for our customers by troubleshooting equipment before it leaves the shop.

We build many different types of equipment: from simple straight running conveyors to complex machinery, no matter what it is IPI offers the dedication to complete satisfaction of our customers to ensure repeat business.
